

4. Feature Selected: Overall Page Color Scheme (UI Design)

Issue Identified:

The current design uses a basic blue and white color combination, which feels bland and lacks visual appeal.

It doesn't create enough contrast or personality, and doesn't align with modern UI design trends.

Suggested Improvement:

Use a more vibrant and balanced color palette, including:

A primary brand color (e.g., deep blue or teal).

Complementary accent colors for buttons, highlights, and hover states.

A neutral background for better content focus.

Why This Helps:

Enhances visual appeal and makes the platform more engaging.

Improves readability and user focus.

Builds a stronger brand identity through color psychology.
