

5. Feature Selected: Footer Layout (Attached with Sidebar)

Issue Identified:

The footer is attached to the sidebar, preventing it from taking up the full width of the screen, especially on larger displays or when the page is scrolled.

This creates an unbalanced and unattractive layout, with the footer appearing misaligned and cut off.

Suggested Improvement:

Separate the footer from the sidebar so it doesn't depend on the sidebar's width.

Make sure the footer spans the full width of the screen, aligning with the main content area.

Use flexbox or grid to create a layout where the footer stays at the bottom but is aligned properly across different screen sizes.

Why This Helps:

Provides a more balanced footer layout, improving the overall aesthetic of the page.

Ensures better readability and visual consistency on all screen sizes, enhancing the user experience.

Gives the page a more polished and professional look.

```
<!DOCTYPE html>
